Data through 1-31-23

2-07-23 | by Alec Lucas

Appreciation for how Baird Ultra Short Bond's capable and collaborative investing culture pairs with the firm's simple but effective style earns an upgrade of the investor shares' Morningstar Analyst Rating to Gold from Silver, while its institutional shares remain Gold.

Other top-tier firms may have bigger staffs and broader remits; Baird operates differently, and is excellent in its own right. Co-CIO Mary Ellen Stanek, winner of Morningstar's 2022 Outstanding Portfolio Manager award, and co-CIO Warren Pierson head this fund's veteran 10-person management team, whose members complement one another's strengths and stick to a straightforward, winning playbook.

Modest fees are critical to that playbook, allowing the team to focus on U.S. dollar-denominated bonds of primarily investment-grade quality

without the complications of derivatives or leverage. The approach begins with matching the Bloomberg Short-Term U.S. Government/Corporate Index's overall interest-rate sensitivity and then trying to add value through more repeatable means.

Security selection and sector allocation among corporates, securitized, and government bonds are among those means. In 2022, for example, the managers cut the portfolio's asset-backed securities stake by 7.5 percentage points to 10.7% by year-end, while increasing exposure to high-quality nonagency commercial mortgage-backed securities by 8.5 percentage points to 8.7%. They also hiked the fund's BBB weighting by nearly 10 percentage points in the first quarter before paring back to end the year at 37.1%.

Thanks to making more right moves than wrong ones, the fund has an enviable record. It has beaten its index and distinct ultrashort bond Morningstar Category peer median in seven out of its nine calendar years of existence. In 2022, its institutional shares' 0.96% return outpaced the index and peer median by 391 and 87 basis points, respectively. Versus the index, bonding picking within and overweighting corporate credit, especially short BBB debt (maturities of less than 1.5 years), helped the most. But so too did cutting ABS exposure.

The fund is a topnotch choice, especially for investors in search of a conservative option.

Process Pillar High | Alec Lucas 02/07/2023
 Focused on U.S. dollar-denominated bonds of primarily investment-grade quality without the complications of derivatives or leverage, or the need to clear lofty fee hurdles, Baird Advisors' simple but effective investing style merits a High Process rating.

Citing the difficulty of predicting interest-rate changes consistently, Baird's approach begins with matching this fund's overall interest-rate sensitivity, or duration, to the Bloomberg Short-Term U.S. Government/Corporate Index. Aiming to beat this bogy by 15 to 25 basis points per year, gross of fees, the team tries to add value through yield-curve positioning, sector allocation, security selection, and competitive trade execution.

Security selection and sector allocation among corporates, securitized, and government bonds receive the most focus. Whether individual bonds, issuers, or sectors, the team looks for strong fundamental features, attractive relative value, and fit within its broader macroeconomic views. Non-investment grade debt is capped at 10%, but the managers typically stay far from that limit, and generally buy debt rated at least B or what they perceive to be equivalent quality if unrated. The fund's credit profile as a result tends to look tame relative to more aggressive ultrashort bond Morningstar Category peers.

The hunt for value even extends to yield-curve strategies for Treasuries. The team looks for incrementally more attractive Treasuries when buying and sells those with the richest valuations.

Relative to its Treasury-heavy Bloomberg U.S. Government/Credit 1-3 Year Index, the fund tends to overweight corporate credit. It has historically allocated about 55% to 75% of its assets to the sector, versus 15% to 25% for the index. Within corporate credit, the fund entered 2022 with a 7.4-percentage-point financials overweight that the team increased to 11.9 percentage points by year-end. The team continues to like financials, noting banks' generally stout capital positions and alignment of their management incentives with high ratings given that banks consistently need to access debt markets.

The fund's out-of-benchmark securitized stake ended 2022 at 20.6% of assets, up modestly from 19.9% a year prior. Although the overall securitized weighting didn't change much, the mix in two of its subsectors did. As repeated interest-rate hikes weighed on the mortgage market in 2022, the managers cut the asset-backed securities stake by 7.5 percentage points to 10.7% by year-end, while increasing exposure to high-quality nonagency commercial mortgage-backed securities by 8.5 percentage points to 8.7%.

At year-end 2022, about half of the fund's 76.1% stake in investment-grade debt was in bonds with BBB ratings. Combined exposure to junk bonds and non-rated debt was then 0.3%, well below the fund's 1.9% historical average and peak weighting of 6.6% at year-end 2014.

Performance Pillar | Alec Lucas 02/07/2023

The fund has a strong record since its year-end 2013 inception. Through January 2023, its institutional shares' 1.4% annualized gain beat the Bloomberg Short-Term U.S. Government/Corporate Index by 62 basis points while placing near the top quartile out of nearly 65 distinct ultrashort bond Morningstar Category peers. Adjusted for volatility, results looked even better: the institutional shares' Sharpe ratio (a measure of return relative to standard deviation) was superior to the benchmark's and placed first in the peer group.

Consistent outperformance has been a hallmark here. Through 2022, the fund has beaten its index and distinct peer median in seven out of its nine calendar years of existence. Versus the benchmark, the fund's best showing was in 2022, when its 0.96% return outpaced the index by 391 basis points. Bonding picking within and overweighting corporate credit, especially short BBB debt (maturities of less than 1.5 years), helped the most that year.

Although prioritizing income consistent with capital preservation, the fund has nonetheless helped mitigate the effect of inflation, as measured by the Consumer Price Index. From January 2014 through December 2022 (the most recent month for which CPI data is available), the fund grew each initial dollar invested into \$1.13, versus the roughly \$1.27

required to maintain purchasing power. By contrast, the average peer (inclusive of all share classes) grew each initial dollar invested into \$1.10 over the same period.

People Pillar ● High | Alec Lucas 02/07/2023
Appreciation for how Baird Advisors' capable and collaborative investing culture pairs with the firm's simple but effective style earns the fund a People upgrade to High from Above Average.

Other top-tier firms may have bigger staffs and broader remits; Baird operates differently, and is excellent in its own right. Co-CIO Mary Ellen Stanek, winner of Morningstar's 2022 Outstanding Portfolio Manager award, and co-CIO Warren Pierson head this fund's veteran 10-person management team, whose members complement one another's strengths and stick to a straightforward, winning playbook.

Alongside Stanek and Pierson, Charles Groeschell and research director Jay Schwister set the tone here; each has about 40 to 45 years of industry experience. The other managers have a wider range of experience but collectively represent the next generation. Lead Jeffrey Schrom and comanagers Andrew O'Connell and Abhishek Pulakanti work as part of a seven-person credit team; Meghan Dean and Patrick Brown oversee a seven-person securitized team; and M. Sharon deGuzman guides Baird's seven-person portfolio construction and risk group.

Stability is a strength. Apart from two retirements in 2020 and 2021, respectively, no manager has left since this fund's year-end 2013 inception. There have also been only two analyst departures since 2016, both for personal reasons.

Fund ownership stands out, too. Managers invest in all their strategies, with three owning more than \$5 million each across the lineup.

Parent Pillar ● High | Gabriel Denis 03/25/2022
Baird's best-in-class stewardship attributes and investor alignment deserve a Parent rating upgrade to High from Above Average.

The firm's taxable-bond franchise, which boasts low fees, a well-resourced team, and a risk-aware investment process across its strategies, has garnered considerable investor attention over the past few years. It swelled from \$37 billion in 2016 to \$120 billion at the end of 2021, encompassing 85% of the firm's total \$139 billion in assets. This growth bears monitoring, but longtime CIO and lead fixed-income portfolio manager Mary Ellen Stanek has shown prudence in adding personnel and operational resources to manage this considerable load. She has also been circumspect in succession planning and elevated her veteran deputy Warren Pierson to co-CIO in October 2021. Though the firm's municipal-bond and equity franchises are much smaller, they also sport sensible leadership and many of the same positive attributes as the taxable fixed-income lineup.

Baird has long supported its investors by providing transparent reporting on its own firm and its investment rationale through timely market updates and webinars. Internally, the firm is also keen to encourage employee retention and engagement: Turnover among the firm's analyst staff has historically been low, and around two thirds of employees owned stock in the privately held firm at the end of 2021.

Price Pillar | Alec Lucas 02/07/2023

It's critical to evaluate expenses, as they come directly out of returns. Based on our assessment of the fund's People, Process, and Parent pillars in the context of these expenses, we think this share class will be able to deliver positive alpha relative to the category benchmark index, explaining its Morningstar Analyst Rating of Gold.

Important Disclosure Information

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value of an investment in the fund will fluctuate so that an investor's shares when redeemed may be worth more or less than their original cost. The fund's current performance may be lower or higher than the performance data quoted. For performance current to the most recent month-end, please visit bairdfunds.com. Carefully consider a fund's investment objectives, risks, charges, and expenses before investing. The Morningstar Analyst Rating™ is not a credit or risk rating. It is a subjective evaluation performed by Morningstar's manager research group, which consists of various Morningstar, Inc. subsidiaries ("Manager Research Group"). In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission. The Manager Research Group evaluates funds based on five key pillars, which are process, performance, people, parent, and price. The Manager Research Group uses this five-pillar evaluation to determine how they believe funds are likely to perform relative to a benchmark over the long term on a risk adjusted basis. They consider quantitative and qualitative factors in their research. For actively managed strategies, people and process each receive a 45% weighting in their analysis, while parent receives a 10% weighting. For passive strategies, process receives an 80% weighting, while people and parent each receive a 10% weighting. For both active and passive strategies, performance has no explicit weight as it is incorporated into the analysis of people and process; price at the share-class level (where applicable) is directly subtracted from an expected gross alpha estimate derived from the analysis of the other pillars. The impact of the weighted pillar scores for people, process and parent on the final Analyst Rating is further modified by a measure of the dispersion of historical alphas among relevant peers. For certain peer groups where standard benchmarking is not applicable, primarily peer groups of funds using alternative investment strategies, the modification by alpha dispersion is not used.

The Analyst Rating scale is Gold, Silver, Bronze, Neutral, and Negative. For active funds, a Morningstar Analyst Rating of Gold, Silver, or Bronze reflects the Manager Research Group's expectation that an active fund will be able to deliver positive alpha net of fees relative to the standard benchmark index assigned to the Morningstar category. The level of the rating relates to the level of expected positive net alpha relative to Morningstar category peers for active funds. For passive funds, a Morningstar Analyst Rating of Gold, Silver, or Bronze reflects the Manager Research Group's expectation that a fund will be able to deliver a higher alpha net of fees than the lesser of the relevant Morningstar category median or 0. The level of the rating relates to the level of expected net alpha relative to Morningstar category peers for passive funds.

For certain peer groups where standard benchmarking is not applicable, primarily peer groups of funds using alternative investment strategies, a Morningstar Analyst Rating of Gold, Silver, or Bronze reflects the Manager Research Group's expectation that a fund will deliver a weighted pillar score above a predetermined threshold within its peer group. Analyst Ratings ultimately reflect the Manager Research Group's overall assessment, are overseen by an Analyst Rating Committee, and are continuously monitored and reevaluated at least every 14 months.

For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to <https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx>.

The Morningstar Analyst Rating (i) should not be used as the sole basis in evaluating a fund, (ii) involves unknown risks and uncertainties which may cause the Manager Research Group's expectations not to occur or to differ significantly from what they expected, and (iii) should not be considered an offer or solicitation to buy or sell the fund.

The Morningstar four-star rating for the Institutional Class Baird Ultra Short Bond Fund is the overall rating received among 218 Ultrashort Bond Funds. The fund received four stars for the three-year period among 218 Ultrashort Bond Funds and four stars for the five-year period among 180 Ultrashort Bond Funds, as of January 31, 2023.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star.

The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year

period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

The average annual total returns for the Institutional Class of the Baird Ultra Short Bond Fund as of January 31, 2023, are 1.66% for the one-year, 1.66% for the five-year and 1.40% since its December 31, 2013, inception date. The gross expense ratio of the Institutional Class is 0.30%, the net expense ratio is 0.15%.

The average annual total returns for the Bloomberg U.S. Short-Term Government/Corporate Bond Index as of January 31, 2023, are 1.17% for the one-year, 1.41% for the five-year and 1.03% since the fund's inception.

The Barclays 1-3 U.S. Government/Credit Bond Index is an index consisting of Treasury or government agency securities and investment grade corporate debt securities with maturities of one to three years. Indices are unmanaged and are not available for direct investment.

The Fund may invest in mortgage- and asset-backed securities which may be subject to prepayment risk and thus may be more sensitive to interest rate changes than other types of debt securities. The Fund may also invest in U.S. dollar denominated securities issued by foreign issuers which involve additional risks including political and economic instability, differences in financial reporting standards and less regulated securities markets. While the U.S. government has historically provided financial support to various U.S. government-sponsored agencies, no assurance can be given that it will do so in the future if it is not obligated by law. A bond's market value may be affected significantly by changes in interest rates – generally, when interest rates rise, the bond's market value declines and when interest rates decline, its market value rises ("interest-rate risk"). Duration risk is the risk associated with the sensitivity of a bond's price to a one percent change in interest rates. Ratings are measured on a scale that ranges from AAA or Aaa (highest) to D or C (lowest). Investment grade investments are those rated from highest down to BBB- or Baa3.
