Summary Prospectus **May 1, 2025**

Before you invest, you may want to review the Baird Equity Opportunity Fund's (the "Fund") prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund, including the Fund's statement of additional information and shareholder reports, online at <http://www.bairdassetmanagement.com/funddocuments>. You may also obtain this information at no cost by calling 1-866-442-2473 or by sending an e-mail request to prospectus@bairdfunds.com. The Fund's prospectus and statement of additional information, both dated May 1, 2025, are incorporated by reference into this summary prospectus.

Investment Objective

The investment objective of the Baird Equity Opportunity Fund (the “Fund”) is to provide long-term capital appreciation.

Fees and Expenses of the Fund

The table below describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.

Shareholder Fees

(fees paid directly from your investment)

None

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	<i><u>Investor Class Shares</u></i>	<i><u>Institutional Class Shares</u></i>
Management Fees	1.25%	1.25%
Distribution and Service (12b-1) Fees	0.25%	None
Other Expenses	<u>0.48%</u>	<u>0.48%</u>
Total Annual Fund Operating Expenses	1.98%	1.73%
Less: Fee Waiver/Expense Reimbursement ⁽¹⁾	<u>-0.48%</u>	<u>-0.48%</u>
Total Annual Fund Operating Expenses After Fee Waiver/Expense Reimbursement	1.50%	1.25%

⁽¹⁾ Robert W. Baird & Co. Incorporated (the “Advisor”) has contractually agreed to waive management fees and/or reimburse other expenses in order to limit the Fund’s total annual fund operating expenses to 1.25% and 1.50% of average daily net assets for the Institutional Class and Investor Class shares, respectively. The Advisor’s expense reimbursement agreement includes the fees and expenses incurred by the Fund in connection with the Fund’s investments in other investment companies (to the extent, in the aggregate, such expenses exceed 0.0049% of the Fund’s average daily net assets) and interest expense, but excludes taxes, brokerage commissions and extraordinary expenses. If such excluded expenses were incurred, Fund expenses would be higher. The agreement will continue in effect through at least April 30, 2026 and may only be terminated prior to the end of this term by or with the consent of the Board of Directors. The Advisor is not entitled to recoup any fees waived and/or expenses reimbursed under the agreement.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Please note that the one-year numbers below are based on the Fund’s net expenses resulting from the fee waiver/expense reimbursement arrangement described above. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Investor Class Shares	\$153	\$575	\$1,023	\$2,268
Institutional Class Shares	\$127	\$498	\$894	\$2,001

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 76% of the average value of its portfolio.

Principal Investment Strategies

The Fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in equity securities. However, the Fund will not borrow for investment purposes.

The Fund invests primarily in a select portfolio of equity securities of companies with small- to medium-market capitalizations (those with market capitalizations, at the time of purchase, of less than \$20 billion). Although the Fund invests principally in U.S. companies, the Fund may invest up to 15% of its total assets in equity securities of foreign companies.

Equity securities in which the Fund may invest include common stocks, preferred stocks, American Depositary Receipts (“ADRs”) or other depositary shares or receipts, rights, warrants, exchange-traded funds (“ETFs”), and options whose reference asset is an equity security or equity securities index. In addition to equity ETFs, the Fund may also invest in ETFs generally. The Fund may also purchase and sell (or write) options to hedge its portfolio or enhance returns.

The Fund will normally hold a limited number (typically 25 to 50) of companies. However, the Fund may hold fewer or more companies from time to time and invest in companies with larger market capitalizations when Greenhouse Funds LLLP (the “Subadvisor”), the Fund’s sub-advisor, believes doing so will help efforts to achieve the Fund’s investment objective. The Fund will hold a mix of both value and growth stocks as part of the Subadvisor’s opportunistic approach to investing.

The Fund is “non-diversified,” meaning that it may invest a greater percentage of its total assets in a smaller number of companies than a diversified mutual fund. Given the Subadvisor’s opportunistic investment strategy, the Fund will generally be overweight in certain sectors and underweight in other sectors, as compared to the sector weightings of the Russell 2000[®] Index (the Fund’s benchmark index), based on the Subadvisor’s judgment of the sectors’ relative attractiveness and its individual securities selection. The Fund may have little or no exposure to certain sectors. The Fund’s sector exposures will likely change over time, as macroeconomic, market, sector and company-specific conditions change.

In selecting investments for the Fund, the Subadvisor employs bottom-up research and fundamental analyses with a focus on companies that the Subadvisor believes possess a favorable risk/return profile. The Subadvisor seeks attractive opportunities for the Fund by evaluating industry dynamics and competitive forces as well as a company’s business model, earnings quality, profitability, cash flows, management acumen and demonstrated capital stewardship. Extensive

financial modeling and valuation assessments are then used to calculate the expected risk and return, after which the Subadvisor exercises its experience and judgment to determine timing and position sizing.

The Subadvisor seeks companies with the following key attributes:

- Large addressable market with a well-structured competitive landscape;
- Attractive business model with a sustainable competitive advantage;
- Stable or expanding profit margins and return on capital;
- Positive and growing free cash flow;
- Disciplined management team practicing intelligent capital deployment; and
- The presence or prediction of meaningful change including business model, product set, management, capital allocation strategy and valuation.

The Subadvisor considers the following factors, among others, in deciding to sell positions: when the price objective has been reached with no change to underlying fundamentals, when a significant negative event changes the Subadvisor's view of the company's prospects, when target catalysts are realized or when an investment loses its attractiveness relative to other potential opportunities. The Subadvisor will also trim or sell securities to manage the Fund's risk related to position sizing.

Although the Subadvisor's target investment horizon is generally measured in years, the Subadvisor may from time to time engage in short-term trading for the Fund to take advantage of potential opportunities, which may increase portfolio turnover.

Principal Risks

Please be aware that you may lose money by investing in the Fund. The following is a summary description of certain risks of investing in the Fund.

Stock Market Risks

Stock prices vary and may fall, thus reducing the value of the Fund's investments. Certain stocks selected for the Fund's portfolio may decline in value more than the overall stock market. U.S. and international markets have experienced price volatility in recent months and years. Continuing market volatility may have adverse effects on the Fund.

Management Risks

The Subadvisor's judgments about the attractiveness, value and potential appreciation of particular companies' stocks may prove to be incorrect. Such errors could result in a negative return to the Fund and a loss to you.

Non-Diversified Fund Risks

As a non-diversified fund, the Fund may invest a larger percentage of its total assets in a smaller number of companies compared to a diversified fund. As a result, a decline in value of one or a few securities held by the Fund will more adversely impact the Fund's performance than if the Fund's total assets were more evenly invested in a larger number of companies. The Fund's share price can be expected to fluctuate more than that of a similar fund that is diversified.

Equity Securities Risks

Equity securities may experience sudden, unpredictable drops in value or long periods of decline in value. This change may occur because of factors that affect securities markets generally or factors affecting specific industries, sectors or companies in which the Fund invests.

Common Stock Risks

Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Holders of common stocks are generally subject to greater risk than holders of preferred stocks and debt obligations of the same issuer because common stockholders generally have inferior rights to receive payments from issuers in comparison with the rights of preferred stockholders, bondholders and other creditors.

Smaller Market Capitalization Risks

Stocks of companies with small- and medium-market capitalizations involve a higher degree of risk than investments in the broad-based equities market. Small- to mid-capitalization stocks are often more volatile and less liquid than investments in larger companies, and are more likely to be adversely affected by poor economic or market conditions. In addition, small- to mid-capitalization companies may lack the management experience, financial resources and product diversification of larger companies, making them more susceptible to market pressures and business failure.

Economic Sector Risks

The Fund may invest a higher percentage of its total assets in one or more economic sectors, which may involve being overweight in those sectors relative to the Fund's benchmark index. Adverse conditions impacting those sectors may have a significant negative impact on the Fund's absolute and relative performance. Conversely, the Fund may be underweight or not invested in certain sectors relative to the Fund's benchmark index. Should those sectors experience outperformance, the Fund may underperform relative to the benchmark index.

Options Risks

The Fund may purchase and sell (or write) call and put options. Options are subject to various types of risks, including market risk, liquidity risk, volatility risk, counterparty risk, legal risk and operations risk. With options purchased by the Fund, the risk is limited to the premium paid for the option if the underlying stock price moves in the opposite direction from desired and the option expires worthless. For options sold or written by the Fund, the primary risk is that the underlying stock price may move directionally away from the exercise price resulting in the option holder exercising the option and requiring the Fund to either deliver the securities (in the case of a call option) or pay for the securities (in the case of a put option) and recognize a significant loss.

ETF Risks

ETFs in which the Fund invests typically will not be able to replicate exactly the performance of the underlying assets or index they track. You will indirectly bear fees and expenses charged by the ETFs in which the Fund invests, in addition to the Fund's direct fees and expenses. Accordingly, your cost of investing in the Fund will generally be higher than the cost of investing directly in the ETF. The market price of ETF shares may trade at a discount to their net asset value ("NAV") or an active trading market for ETF shares may not develop or be maintained.

Portfolio Turnover Risks

The Fund may from time to time buy and sell portfolio securities and other assets to rebalance the Fund's exposure to various economic sectors. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund's performance to be less than you expect.

Foreign Securities Risks

Securities of foreign issuers and ADRs are subject to certain inherent risks, such as political or economic instability of the country of issue and government policies, tax rates, withholding of foreign taxes, prevailing interest rates and credit conditions that may differ from those affecting domestic corporations. Securities of foreign issuers and ADRs may also be subject to currency fluctuations and controls and greater fluctuation in price than the securities of domestic corporations. Foreign companies generally are subject to different auditing and financial reporting standards than those applicable to domestic companies.

Small Fund Risk

There can be no assurance that the Fund will grow to or maintain an economically viable size.

Shareholder Concentration Risk

A large percentage of the Fund's shares are held by a small number of shareholders, including persons and entities related to the Advisor and Subadvisor. A large redemption by one or more of these shareholders could materially increase the Fund's transaction costs and could increase the Fund's ongoing operating expenses, which would negatively impact the remaining shareholders of the Fund.

Valuation Risks

When the Fund values foreign equity portfolio securities that are traded in a local foreign market, an evaluated adjustment factor supplied by the Fund's fair value pricing service will generally be used. The prices of the Fund's securities, as modified by the evaluated adjustment factor, may be different from the prices used by other mutual funds or from the prices at which the Fund's securities are actually bought or sold.

Cybersecurity Risk

With the increased use of technologies such as the Internet to conduct business, the Fund is susceptible to operational, information security, and related risks. Cyber incidents affecting the Fund or its service providers may cause disruptions and impact business operations, potentially resulting in financial losses, interference with the Fund's ability to calculate its NAV, impediments to trading, the inability of shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs.

Recent Market Events Risks

U.S. and international markets have experienced significant periods of volatility due to a number of economic, political and other global macro factors. The transition to a new administration following the 2024 U.S. Presidential election has introduced meaningful market uncertainty as new policies, executive orders, and legislation have been and will likely continue to be proposed or enacted. Geopolitical risks appear elevated with the war between Ukraine and Russia now passing its third anniversary, tensions remain high in the Middle East, and trade relations between the U.S. and its trading partners, particularly China, are strained due to new and evolving tariff rates. Domestically, stagflation risks (slowing economic growth and rising inflation) present additional challenges to the Federal Reserve's dual mandate of price stability and maximum employment. Elevated political discord also makes legislative efforts more difficult. The uncertain course of these various factors may have a significant negative impact on the global economy and may result in an elevated risk environment with increased volatility in asset prices, which could have an adverse effect on the value of the Fund's investments.

Performance

The performance information presented below provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for one, five and ten years and since inception periods compare with those of the Russell 2000[®] Index, the Fund's benchmark, and a broad measure of market performance. Past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. As of December 12, 2021, the Subadvisor became the Fund's sub-advisor, the Fund's name changed to the Baird Equity Opportunity Fund, and the Fund became classified as non-diversified for purposes of the Investment Company Act of 1940. Prior to December 12, 2021, the Fund was known as the Baird SmallCap Value Fund and was managed by the Advisor without the use of a sub-advisor and with a different investment strategy. The performance results shown in the bar chart and table below for periods prior to December 12, 2021 reflect periods during which the Fund was managed by the Advisor prior to the retention of the Subadvisor and when the Fund was managed as a diversified portfolio for purposes of the Investment Company Act of 1940. The performance record for periods prior to December 12, 2021 does not illustrate the performance of the Subadvisor or the Fund's investment strategy in effect as of the date of this prospectus. Updated performance information is available on the Fund's website at www.bairdfunds.com or by calling the Fund (toll-free) at 1-866-442-2473.

Calendar Year Returns for Institutional Class Shares

Best quarter: 4th quarter 2020 27.62%

Worst quarter: 1st quarter 2020 -27.11%

Average Annual Total Returns as of December 31, 2024

	1 Year	5 Years	10 Years	Since Inception 5/1/12

Tax Information

The Fund's distributions may be subject to federal income tax and may be taxed as ordinary income or long-term capital gains unless you are investing through a tax-deferred arrangements or other tax-advantaged arrangements, such as a 401(k) plan or an individual retirement account ("IRA"). You may be taxed later upon the withdrawal of monies from such tax-deferred or other tax-advantaged arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. In addition, some broker-dealers may regard Institutional Class shares of the Fund as "clean" shares and will charge you a commission on the purchase of such shares. Ask your salesperson or visit your financial intermediary's website for more information.
